Personal Projects

Tagify

App Developed with a team under a hackathon by Coding Club , won First Prize

A chat app which makes forming groups much easier where each user carries a tag and while creating group we can specify the group logic i.e the members must have those tags or may have those tags orr should not have those tags and they are automatically added to the group

Codeforces Visualizer

Presently working on social media kind for competitive programmers

An ambitious app, lead by me, presently going on with Appwrite backend in collaboration with design team at Coding Club and some app developers in the Coding Club
